

SLAB Hackathon & AgentForge 2026

Venue: Government College of Engineering and Leather Technology (GCELT), Kolkata

₹5,000 INR + Goodies

GCELT CAMPUS WINNING TEAM PRIZE & SWAG

₹20,000 INR

NATIONAL GRAND PRIZE (TOP TEAM ACROSS 20 CAMPUSES)

1. Essential Timeline & Hybrid Delivery Model

The SLAB Hackathon operates on a structured **hybrid format** designed to maximize development time while maintaining live collaboration and keynote learning on campus.

DATE & TIME	PHASE	ACTION ITEM & DESCRIPTION
19th August, 23:00 IST	Registration Deadline	Final Google Registration Form closes strictly. All individual members must submit.
20th August	Shortlisting & Approvals	Official acceptance emails sent to selected teams alongside WhatsApp group verification.
21st August (All Day)	Build Day (Remote)	Teams build their browser agents remotely from home and record their mandatory 3-minute live working demo video .
22nd August (08:30 - 16:00)	Demo Day & Keynotes (In-Person)	Mandatory physical attendance at GCELT Kolkata for technical sessions, networking, food, and submission.

2. Ground Rules & Mandatory Compliance Policies

Critical Disqualification Triggers

- **100% In-Person Attendance Rule:** Every registered member of an accepted team **must be physically present on 22nd August** at GCELT Kolkata. If even a single member fails to attend, the entire team is immediately disqualified.
- **Exact Team Name Character-Matching:** Team names across all individual member forms must match character-by-character (including casing, spaces, and spelling). E.g., if registered as `CodeX`, entering `Codex` or `Code X` results in disqualification.
- **Mandatory 3-Minute Working Live Demo:** Submissions must feature a working video demo of the real browser agent executing tasks live. Pure slide decks without a working demo will not be evaluated.

Responsible AI & Human-in-the-Loop Safeguards

All agent workflows must enforce an explicit human confirmation prompt prior to executing sensitive, state-changing actions (e.g., final payment checkouts, publishing social posts, sending outbound communications, deleting cloud/database resources).

3. Event Day Schedule (22nd August 2026 — GCELT Campus)

TIME SLOT	SESSION / ACTIVITY	TRACK & DETAILS
08:30 AM – 09:30 AM	Participant Check-ins & Verification	Desk check-in, team attendance validation, table allotment.
09:30 AM – 10:00 AM	Inauguration & Welcome Address	Opening remarks by hosts & organizing leads.
10:00 AM – 10:15 AM	Hands-on Primer: Building with webcmd	Deep-dive into browser state exploration, command caching & adapters.
10:15 AM – 11:40 AM	On-site Refinement & Mentorship	Technical troubleshooting, video submission prep, repo cleanup.
11:40 AM – 12:00 PM	OSEN Session: Monetizing Developer Projects	How to earn more through your tech projects, monetization strategies & grants.
12:00 PM – 12:15 PM	AgentForge 2026: Welcome	Introduction to Google for Developers AI track.
12:15 PM – 01:15 PM	Google Session 1: Agents with Authority	Autonomous agent decisioning, tool execution & security models.
01:15 PM – 02:15 PM	Google Session 2: Building with Google AI	Gemini API, Vertex AI, Google AI Studio agentic development.
02:15 PM – 03:00 PM	Q&A, Community Closing & Networking	Community announcements, cross-campus connections & photo session.
03:00 PM – 04:00 PM	Lunch Provided & Final Submissions	Food served; official project submission portal opens and closes.

4. Frequently Asked Questions & Operational Guidelines

Q1. What exactly do participants need to do during the hackathon?

Build an autonomous or self-learning **Browser Agent** using webcmd (and optional LLM frameworks like Gemini/Claude/OpenAI) that automates a meaningful, real-world browser workflow (e.g., automated research, dynamic procurement, multi-portal data aggregation, or OSINT tracking). Record a 3-minute video showing the agent executing live, and submit the repo and demo on Event Day.

Q2. Can a participant participate individually, or is a team mandatory?

Both formats are fully allowed! You can build **solo** or form a **team of up to 4 members**.

Q3. What is the minimum and maximum team size?

Minimum team size is **1 member (Solo)** and maximum team size is **4 members**. Note: Every single member of the team must register individually and be physically present on campus on 22nd August.

Q4. Are there any specific programming languages or technologies that we must use?

You must leverage **webcmd** (self-learning browser infrastructure). Beyond that, you are completely free to bring your preferred stack: Python, JavaScript/TypeScript, Playwright, Puppeteer, Browser-Use, LangChain, Google AI Studio/Gemini API, Claude Code, Codex, or local Ollama models.

Q5. Are ChatGPT, Claude, Gemini, or other AI tools allowed?

Yes, 100% encouraged! You can use ChatGPT, Claude, Gemini, GitHub Copilot, Codex, Vertex AI, or any other AI coding assistant/LLM API to build, orchestrate, and power your agent.

Q6. Can we use previously created projects or code, or does everything need to be built from scratch?

The core agent workflow and its webcmd integration must be built for this hackathon during the official Build Window. However, you can freely utilize open-source boilerplates, standard libraries, UI kits, browser automation wrappers, and external APIs.

Q7. How much time will be given to complete the project?

Selected teams receive shortlisting on **20th August** and have the entire **21st August (Build Day - 24+ hours remote)** to develop their project and record the 3-minute demo. Teams can further refine their projects on 22nd August morning until final submission closes at **4:00 PM IST**.

Q8. What needs to be submitted (source code, PPT, demo video, etc.)?

Submissions require: **(1) Public GitHub Repository URL** with clean code & README .md, **(2) 3-Minute Working Video Demo URL** (Loom/YouTube/Drive), **(3) Team Contact Details** via the official Google Form, and **(4) Dual submission on Craftora** for exclusive swag and goodies. Slide decks (PPTs) are optional.

Q9. What rules or activities can lead to disqualification?

Immediate disqualification will occur if: (1) Any team member is absent during the in-person event on 22nd August, (2) Team names do not match character-for-character across registration forms, (3) Submissions contain mock/fake non-working demos without real browser execution, or (4) The agent performs malicious actions or bypasses human approval steps on sensitive tasks.

Q10. How will the projects be judged/evaluated?

Evaluation is conducted **centrally and asynchronously by the core webcmd engineering team** across all 20 campuses using a 100-point rubric: **Live Reliability (30 pts)**, **Real-World Usefulness (25 pts)**, **Technical Depth & Recovery (20 pts)**, **Creativity (15 pts)**, and **Demo & Storytelling (10 pts)**. Results will be published nationwide online.

5. Participant Hardware & Connectivity Advisory

To ensure uninterrupted productivity throughout the event day, all participants are required to prepare their own equipment:

- **Laptops & Power Strips:** Bring fully charged laptops and personal multi-plug extension cords (venue wall outlets are limited).
- **Internet Hotspots:** Carry personal mobile hotspots/data dongles. Dedicated high-speed campus Wi-Fi will *not* be provided for local testing.
- **Pre-Configured API Tokens:** Pre-fund and verify API access for Google AI Studio, Gemini, Vertex AI, Anthropic, or OpenAI before arriving on campus.

6. Submission Deliverables, Craftora & Goodies

During the official submission window (**3:00 PM – 4:00 PM IST on 22nd August**), all teams must submit to both the Google Form and the **Craftora** platform.

Exclusive GCELT Campus Swag & Goodies (via Craftora)

- **1st Prize Team:** Exclusive Developer T-Shirts for all team members.
- **2nd Prize Team:** Curated Tech & AI Engineering Books for all team members.
- **3rd Prize Team:** Curated Tech & AI Engineering Books for all team members.

Recommended 3-Minute Video Breakdown Template

TIME WINDOW	FOCUS AREA	RECOMMENDED CONTENT
0:00 – 0:30 (30s)	Problem & Friction	State the manual browser bottleneck and target website complexity.
0:30 – 2:00 (90s)	Live Agent Execution	Uncut screen recording showing webcmd navigating, learning, and extracting data.
2:00 – 2:30 (30s)	Architecture & Recovery	Highlight how webcmd handles DOM changes, caching, and Gemini/LLM reasoning.
2:30 – 3:00 (30s)	Output & Verification	Showcase structured JSON/data output and the human approval prompt.

7. Curated High-Impact Project Ideas

Monetization & Freelance

Autonomous Grant & Bounty Hunter

Traverses global developer bounty boards, freelance marketplaces, and Web3 grant portals using webcmd. Synthesizes project RFP requirements into custom proposals with Gemini.

Enterprise & Procurement

Government Tender & RFP Aggregator

Traverses dynamic government procurement and e-tendering portals, handles complex multi-page pagination, and parses eligibility PDFs into a clean structured JSON schema.

Cloud & DevOps

Cloud Console Health & Quota Auditor

Navigates cloud consoles (GCP / AWS), reads complex telemetry and quota dashboards, and generates automated cost-optimization and idle-instance alerts.

Commerce & Logistics

Multi-Platform Flash Sale & Arbitrage Bot

Learns dynamic search and filter paths across volatile e-commerce portals, monitors real-time inventory, and queues cart checkouts with human verification.

8. Organizing Team & Community Channels

- **Organizing Leads:** Sriz Debnath, Arpan Roy, Shilajit Khan.
- **Official WhatsApp Community:** [Join GCELT WhatsApp Group](#)
- **Webcmd Developer Documentation:** github.com/agentrhq/webcmd
